**Special Fire-Fighting Procedures:** This product is not likely to burn/flash. This product does not contain Ammonium Nitrate. Use self-contained breathing apparatus as protection against basic smoke hazard.

**Unusual Fire and Explosion Hazards:** Keep away from heat and open flame. Remove containers from fire area. Paper bags may burn; plastic melt. Contains no explosive ingredients.

**V. HEALTH HAZARDS**

**Primary Route(s) of Entry:** Skin, eyes, ingestion, inhalation.

**Signs & Symptoms of Exposure**

**Acute:** Swallowing: May cause nausea, vomiting, abdominal pains, myotonia, muscle weakness and fall in blood pressure.

**Eyes:** Eye contact. Vapors or spray mists are irritating to the eyes.

**Skin:** May be irritating to the skin.

**Chronic:** Repeated overexposure to 2,4-D herbicides may cause liver, kidney, gastrointestinal and muscular effects. Rare cases of peripheral nerve damage have been reported but extensive animal studies have failed to substantiate these observations, even at high doses for prolonged periods.

**Emergency First-Aid Procedures**

**Eyes:** Hold eyelids open and flush with a steady, gentle stream of water for at least 15 minutes.

**Skin:** Remove contaminated clothing and immediately wash with plenty of soap and water.

**Inhalation:** Remove victim to fresh air. If not breathing, administer cardiopulmonary resuscitation or artificial respiration. If breathing is difficult, administer oxygen.

**Ingestion:** Give 2-3 glasses of water and get medical attention. Induce vomiting by touching the back of the throat with finger. Do not induce vomiting for an unconscious person. **PRECAUTION:** To prevent aspiration of swallowed product, lay patient on side with head lower than waist.

**Notes to Physician:** No specific antidote is available.

Treat symptomatically. Overexposure to materials other than this product may have occurred.

This product contains two phenoxy herbicide chemicals. Mycotoxic effects may include muscle fibrillations, myotonia and muscular weakness. Ingestion of massive doses may result in persistent fall of blood pressure. Myoglobin and hemoglobin may be found in the urine. Elevations in lactate dehydrogenase (LDH), SGOT, SGPT and aldolase indicate the extent of muscle damage. It has been suggested that overexposure in humans may affect both the central and peripheral nervous systems. The acute effects on the central nervous system resemble those produced by alcohol or sedative drugs. In isolated cases, peripheral neuropathy and reduced nerve conduct velocities have been reported although these observations may be related to other factors.

Gas-liquid chromatography for detecting and measuring chlorophenoxy compounds in blood and urine may be useful in confirming and assessing the magnitude of chlorophenoxy absorption.

**Medical Conditions Aggravated by Exposure:** Skin irritation may be aggravated in persons with existing skin lesions.

Breathing of dust may aggravate asthma and inflammatory or fibrotic pulmonary disease.

**Positive Teratogen or Mutagen Carcinogen(NTP):** No

**Potential Carcinogen (OSHA):** No **IARC:** No

**SAP(EPA):** Class D(not classifiable a human carcinogenicity)

**VI. REACTIVITY**

**Stability:** ☒ Stable ☐ Unstable

**Conditions to Avoid:** Keep product dry since moisture will harden product and render product unusable.

**Incompatibility:** None.

**Hazardous Decomposition Products:** Ammonia, Biuret, Carbon Dioxide, Carbon Monoxide, Carbon Disulfide, Hydrogen Chloride, Hydrogen Sulfide, Carbon Monoxide and Aldehydes may be produced upon decomposition. Noxious fumes are formed under fire conditions. Urea also decomposes to biuret and cyanuric acid. Urea reacts with sodium calcium, or hypochlorite to form explosive nitrogen trichloride.

**Hazardous Polymerization:** ☒ Will not occur ☐ Will occur
